SmartDry

SmartDry is a patented smart laundry sensor in combination with a smart plug that converts any old or new clothes dryer into a Smart appliance. With no wires or messy installation, you simply install the magnetic snap in sensor in your dryer and along with the App on your smart phone you will be getting useful, time savings alerts right away. The Smart hub will shut off your gas dryer automatically when the clothes are dry.

SmartDry will precisely monitors the conditions inside your dryer and is proving smarter than your dryer's electronics. SmartDry sends smart alerts when the clothes are dry, dryer has stopped, when delicate clothes are ready, or if hazardous conditions occur from clogs vents.

SmartDry will turn off your gas 120Vac dryer automatically when your clothes are dry with the SmartDry hub. This way you can set it and forget it and still get all the energy savings automatically. On average SmartDry's sensor saves its users 20+ minutes per load, which immediately starts saving time, money, and reducing your energy usage.

SmartDry also works with Alexa, Google, and SmartThings to let you receive updates right from your smart speaker and other smart devices.

Product Specifications

- **Energy savings:** Save an average of 20 minutes per load of laundry (up to 30% energy savings)
- **Connected Protocols:** Wi-Fi, Bluetooth Low Energy (BLE)
- **Platform Compatibility:** Amazon Alexa, Google Home, and Samsung SmartThings
